

Business Intelligence

Is there ANYTHING you need to know about your business to make it run better? Our comprehensive portfolio of business intelligence solutions enables you to find the information vital to the success of your company. In addition to managed and ad-hoc reporting and ad-hoc query and analysis, our capabilities include extract, transformation & load (ETL), relational data warehousing, multidimensional databases, and data mining. Simply put, we can take your business intelligence from multiple sources and deliver it to you any number of ways and formats.

Empowerment

The iProcess Business Intelligence solution empowers you with fully integrated information to make better decisions and gain control of your business. Our capabilities are flexible, extensive and enable efficient analysis, all contained in one place and at the click of your mouse via iPOWeb, our secure extranet.

Deep Visibility

It's all in the details. Our solution provides those details without the hassles of accessing secondary sources or pulling a physical file. Drill down to specific transactions with just a click of the mouse, view an invoice or see a statement in seconds. Multi-level reporting is available, enabling the grouping of any number of transaction dimension codes into an unlimited number of levels for easy manipulation, integration of business data, and enhanced presentation.

Available 24/7

Whether it's 2:00 AM or 2:00 PM, your data is available via iPOWeb. Users, with pre-defined credentials, can access real-time key data and run reports within our secured extranet environment.

KPIs

Based on your key performance indicators (KPIs) we customize your view of key business information via iPOWeb, including profitability, debt-to-equity, gross margin, inventory value, sales growth, and cost of goods sold (COGS) just to name a few.

IMPROVE PERFORMANCE REDUCE COST CREATE VALUE

Managed Reporting

It's your business, track what's important to you. With our Managed Reporting solution, we customize iPOWeb with real time dynamic report access, dashboards, scorecards, and static reports based on the KPIs you have identified as important to your business. With the power of our Managed Reporting solution, you can keep your finger on the pulse of your business.

Lead Effectively Throughout the Organization

Access to our solution is based on credentials and different users may have different sets of metrics that are important to them. KPIs can be defined for each user and with iPOWeb deliver role-based access to the information they need, each experience can be customized, putting the right information in the right hands.

Information At-A-Glance

Once KPIs are identified and assigned to different users of iPOWeb, charts, tables, dashboards, scorecards and alerts can provide instant information to users. Users can easily view and drill down on key business metrics for additional information.

Real Time Reporting

Our solution provides you with real time dynamic reports that are available to you 24/7. With a click of the mouse, you can obtain information regarding any of your information. We firmly believe, it's your data – you should be able to access it anytime you want and use it to gain greater insight into your business. All reports are available to you in a variety of formats, no need for special proprietary software.

No Report Too Complex

The iProcess Managed Reporting Solution can provide you with complex reports based on your business needs. Our capabilities include analysis, forecasting, multiple data sources and combining information from related reports. Tell us what you need, we build the reporting function for you, giving you the option to access the data when you need it. Based on the different solutions we provide for you, we can pull the data and build reports that are highly complex, but easy to access. Free your time for analysis and decision making, instead of gathering, compiling and synthesizing data.

MORE SERVICES, LESS EXPENSE

Ad Hoc Reporting

The iProcess Ad Hoc Reporting Solution provides reporting and query and analysis functionality. Ad Hoc Reporting enables users to create their own reports and explore company data. Incorporating a user-friendly query function, Ad Hoc Reporting enables the user to access the information they need with just a few clicks of the mouse. No need for special training or advanced technical knowledge.

Easy to Use, Fast Results

Our solution provides access to your business data to create one-off reports for timely and effective decision making. With our intuitive and powerful Ad Hoc Reporting tool, you can explore and find answers to critical questions without the need for extensive training, specialized staff, or technical knowledge of reporting or databases. You can create your own reports using report layout templates containing pre-defined data to build tables, matrices and charts. Set constraints, filter data, group results and sort the output based on your own criteria.

Make it Your Own

Not only can you easily create your own reports, but you can further customize them by adding text, formatting to your specifications, create new fields, add calculations, preview, print and publish, and explore the data related to the content of the report. Queries for navigation reports are generated on the fly and you can keep drilling down through the data to get the information you need. No complicated software to learn and within minutes you have the information you need.

Securely Connect Users

User access to data within any of our solutions is based on predetermined credentials. Our Ad Hoc Reporting Solution uses the same technology that helps securely connect users to data so they have access to only the information that their credentials allow. This enables users to run reports they need with only the information they can access.

PARTNER WITH ONE PROVIDER

Database Capabilities

The power behind iProcess' robust set of business intelligence Database Capabilities includes online analytical processing (OLAP), data mining, relational data warehousing, multidimensional databases and extract, transformation and load (ETL) functionalities. These functionalities provide the ability to analyze and compile data, delivering vital business information to everyone in your organization and reduce internal administrative work through the use of automated report building and processing capabilities. Spend your time analyzing information, instead of compiling it.

Information in Seconds, Not Days

Our solution utilizes the power of OLAP cubes, providing you with the ability to quickly spot trends, from analytical views of sales trends, to customer buying patterns, or any other values that help you better understand your business, available to you instantly, including cash flow, general ledger, revenue, expense, aging, sales, and inventory. Our agile and easy to use solution is available to you with accurate real-time data when you need it, not days or weeks later.

Integration

The iProcess solution easily manages data from a wide array of data sources, with exceptional ETL capabilities, information from our different solution offerings is easily integrated, seamlessly. This enables us to provide you with a competitive edge through a holistic view of your business.

No Need for a Crystal Ball

By using iProcess' Database Capabilities, you have the power to explore data, discover patterns and analyze the results to apply to your business operations, in effect help you predict the future. Collecting vast amounts of data is nice, but just having it doesn't necessarily mean that it is helping your business. That's where the power of data mining comes in. We can take your data, from all of the solutions that we provide, and return to you business intelligence you can leverage for your business operations.

24/7 ONLINE ACCESS TO YOUR COMPANY INFORMATION
